EcoStar

EcoStar

EcoStar®, a division of Carlisle Construction Materials, leads the industry with its premium, steep-slope manufactured slate and shake roofing tiles. EcoStar products exceed quality standards in the roofing industry and are the responsible choice among today's most progressive commercial building owners and facility managers.

Durability

Durability

Every EcoStar tile features incredible strength and flexibility, resulting in a rooftop that requires little to no maintenance and low lifecycle costs that help save you money. Featuring industry-leading warranties and code approvals against wind, fire, rain and hail, EcoStar tiles are guaranteed to offer years of superior performance.

Eco-Friendly

EcoStar tiles help preserve precious natural resources and reduce your ecological footprint. No trees are used and no stones are quarried to create EcoStar's recycled roofing tiles, making them an environmentally friendly alternative to traditional slate and shake products.

LEED® Certification

The recycled content in EcoStar tiles can help you earn LEED certification, a national standard for developing high-performance, sustainable buildings. The LEED green building rating system – developed and administered by the U.S. Green Building Council, a Washington D.C.-based, nonprofit coalition of building industry leaders – is designed to promote design and construction practices that increase profitability while reducing the negative environmental impacts of buildings and improving occupant health and well-being.

To find out more about how EcoStar can help you achieve points from Leadership in Energy and Environmental Design (LEED), please refer to the web page www.ecostar.carlisle.com/resources.html.
